CADAC Studio Installation

After downloading **CADAC Studio** you get three folders: **KPLOT** for 2-, 3-dim plotting and stochastic analysis, **SWEEP** for footprint and launch envelope generation, and **SWEEP++** the preprocessor to SWEEP for C++ simulations. To install the three programs, just click on the respective 'setup' file. You access KPLOT at C:\Program Files (x86)\CADAC Studio\KPLOT (similar for SWEEP and SWEEP++).

The KPLOT/Globe plotting program is no longer part of the download, because it has been flagged as unsafe by recent anti-virus programs, though it has been in use for over two decades without adverse effects. If you need to plot over the globe, send me a self-addressed envelope with a USB drive and I will return it with the globe.exe file. To use it you would have to go off-line and deactivate your virus protection and insert globe.exe at C:\Program Files (x86)\CADAC Studio\KPLOT to replace its dummy file.
